

## SunLync – Desktop Customization

The salon can customize the data that they show in the POS. Generally, this is the bed status', daily sales goals, etc. To set this select SunLync Desktop from the settings.

Here they can set the different goals, for example Sales Goals. Select insert, set the Store, check the goals that they want to track, and then set the different goals for each day. Then Save.

Once any goals are set, select the Misc. tab and then Configure POS Desktop.

## SunLync – Desktop Customization

Select the store this will be set for

And then select Save.

If the POS is open, close it, and reopen.

The desktop will now show to the right of the transaction screen.
